Repository Activity

Patel cloned three internal repositories between December 29, 2025 and January 3, 2026. Two repositories were within his normal engineering responsibilities; the third, VehiclePath-X, was outside his assigned project.

USB Activity

A removable drive was connected on January 3. System logs show 214 files copied during the session, including calibration tables and VehiclePath-X design notes.

Limitations

The logs establish copying activity but do not establish that NovaMotion received or used the files.
